Numerous White Papules on the Vulva
Andrea F. Chen, MD; Lisa Stirling, MD; Christopher Speck, MD; Clara Milkovich, MD; Millhiser School of Medicine, University of Miami, Miami, Florida; (Drs Chen, Speck, and Milkovich); and Comprehensive Dermatology Group, Encino, California (Dr Stirling).

REPORT OF A CASE
A 56-year-old woman presented with an approximately 2-year history of lesions on the vulvar area, which had remained in number and had become pruritic over the past several months. She had a history of human immunodeficiency virus (HIV) infection and had undergone a partial hysterectomy and radiation therapy for cervical cancer, with resultant chronic lymphedema of the left lower extremity.

Long-term Nasal Plaque With Nasal Obstruction
Javier Pedraz, MD, PhD; Marıá J. Onate, MD; Carmen García-Garcıá, MD; Javier Fraga, MD, PhD; Esteban Daudeń, MD, PhD; Clı́nica Dermatológica Dr Daudeń (Drs Pedraz, Onate, García-Garcıá, and Daudeń) and Hospital Universitario de la Princesa (Dr Fraga), Madrid, Spain;

REPORT OF A CASE
A 65-year-old woman presented with a 3-year history of lesions in the vulvar area. She had a history of human immunodeficiency virus (HIV) infection, as well as a history of cervical dysplasia previously treated and followed by her gynecologist. On examination, she had numerous discrete monomorphous white to skin-colored keratotic papules involving her labia majora, proximal labial sulci, phalanges, and glans clitoridis.

Vesicular Lesions on the Vulva
Elizabeth A. Gordon Spratt, MD; Priya Batra, MD; Max K. Fischer, MD, MPH; Miriam Keltz Pomeranz, MD; New York University School of Medicine (Drs Gordon Spratt and Pomeranz); and New York University Langone Medical Center (Drs Batra and Fischer), New York, New York.

REPORT OF A CASE
A 54-year-old woman presented with an approximately 2-year history of asymptomatic, rapidly growing cutaneous, skin-colored papules on the skin of the nasal dorsum. The skin lesion was re-treated twice, once followed by a graft, with subsequent reappearance. The patient also underwent a surgical nasal reconstruction because of a nasal septum collapse. When she presented to our department, significant inflammation and swelling of the nasal mucosa with superficial yellow crusting and contact bleeding were observed on nasal endoscopy. The cutaneous physical examination revealed a firm, indurated, violaceous, nonblanching, non-tender plaque over the nasal dorsum.

Autoinvolutive Papules and Nodules in a Child
Edwaroua Rojas-Mateiz, MD; Marı́ona Salat, MD; Andrea Parecarda, MD; M. Antonia Gonzaleć-Zubiar, MD; Ramon M. Pajol, MD; M. Asuncion Vicente, MD; Hospital Sant Joan de Døia, University of Barcelona (Drs Rojas-Mateiz, Salat, Parecarda, Gonzaleć-Zubiar, and Vicente), and Hospital del Mar-Maria Universitaria, Autonoma de Barcelona (Dr Pajol), Barcelona, Spain.

REPORT OF A CASE
A 2-year-old white boy presented with a 3-month history of asymptomatic, rapidly growing cutaneous lesions involving his face, back, and limbs. He was born after an uneventful pregnancy and delivery, and his growth and development were appropriate for his age.
